All PAOs under PCDA Bangalore (Through website/e-mail)

Sub: Requirement of Virtual Machines for Hosting Website on NIC cloud.

It is requested to estimate requirements (at least for next two years) of cloud resources in terms of VMs, CPU, Memory and storage space for hosting new Dynamic website under development and to be hosted in NIC-Cloud in the format given below by 17/05/2018 through e-mail.

A broad estimate of specification can be derived by keeping in view the expected traffic flow (no. of concurrent users, no. of visitors per day/month etc) and the memory requirements of the pages of website (Dynamic pages require more memory). The Hard disk space of the server can be calculated by analysing the number of tables in the database, data that is going to be stored in the server.

**Name of Office**

Numbers of VM required (atleast Two i.e. Application and Database)	Number of CPUs required in each VM	RAM for each VM	Hard disk space required for Web Server	Hard disk space required for database server	Operating system for both VM	Name of the Database required	Remarks
